

### Key takeaways:

- **CT or TEE are always required for the first 5 patients** (who are presented to the Executive Committee).
- After the Pre-Procedure Review Process, **CT or TEE are the preferred** methods of screening imaging. If you prefer not to order CT or TEE for all patients, **stacking 3 or more cases in one day** will allow you to move forward with only a TTE or MRI as screening imaging and randomize on the table.
- If you cannot stack 3+ cases, we **require that a CT or a TEE** is done as screening imaging.
